Maiia Alekseeva

Product Engineer | Frontend & Full-stack

Lisbon, Portugal · maaya.alexeeva@gmail.com · linkedin.com/in/maiia-alekseeva
github.com/mayyaalekseeva · table-fable.com

SUMMARY

Product-focused engineer with 5+ years of experience delivering complex React and TypeScript applications. Experienced in owning user-facing workflows, translating ambiguous requirements into reliable features, and improving shared developer tooling. Hands-on Node.js and GraphQL backend development; independently building a live Next.js product with LLM integrations.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Ant Design, Material UI, React Hook Form, Yup, Redux, MobX, TanStack Query, Konva.js

Backend & APIs: Node.js, GraphQL resolvers and endpoints, REST APIs, Prisma, PostgreSQL, WebSockets

Testing & tooling: Jest, React Testing Library, Storybook, GitLab CI, Bash, Git, Vite, Nx, Lighthouse

AI & integrations: LLM APIs, Together API, Cursor, Claude, Google Places API

PROFESSIONAL EXPERIENCE

Transneft Technologies — Frontend Developer | Sep 2024 – Present

Enterprise oil transportation network and reference-data platform; additional internal Kafka and graphical editor projects.

- Helped establish reusable frontend patterns and served as the main frontend engineer for a period; reviewed a junior colleague's PRs and coordinated with backend engineers on evolving domain rules. Major functional areas passed customer acceptance.
- Built graph-binding workflows for network vertices and edges with reusable React Hook Form/Yup validation, dependent field resets, duplicate-relationship checks and domain-specific exceptions.
- Implemented source/target/difference views for reference-data versions and reusable search and filtering across data-heavy tables; worked on rendering performance and server-state synchronization.
- Extended a Konva.js screen editor with a configurable rotation pivot across shape types, preserving visible geometry during transformations; contributed to a Kafka service-management UI in a small team.

AMMC Group — Frontend Developer | Sep 2023 – Aug 2024

Public resident-card application platform; short engagement on a B2B railway marketplace.

- Owned frontend implementation of branching resident-card application journeys for different applicant types, including conditional step navigation, form validation and submission workflows.
- Drove redesign of key public-facing screens, profiles and navigation; clarified incomplete requirements with stakeholders and translated them into usable flows for a live service.
- Handled a selective production release using Git cherry-pick and initiated team-wide commit-message conventions to improve change traceability.
- On a railway supplier marketplace, implemented onboarding and document workflows and introduced initial Jest tests and Husky pre-commit checks.

Bars Group — Frontend Developer | Jan 2023 – Aug 2023

Large public-sector government program management platform with hierarchical editable tables and complex permissions.

- Resolved virtualized-table rendering issues across 12 screens by extending a shared Ant Design table wrapper and correcting row-state and scrolling behavior.

- Implemented permission-, workflow-state- and hierarchy-dependent editing rules; fixed document-row identity and unsaved-changes issues across parallel legacy modules.

Orion Innovation — Frontend Developer | Mar 2021 – Jan 2023

Natera (US healthcare diagnostics): patient portal, shared React UI platform and Node.js/GraphQL services.

- Developed patient-facing React features and contributed to Node.js service-layer business logic, GraphQL resolvers and API endpoints.
- Built a Wistia video integration from scratch with localized content, asynchronous player initialization, playback event handling and GraphQL order-update integration.
- Implemented Bash-based package-version validation in an existing multi-stage GitLab CI merge-request pipeline, preventing shared component-library changes from passing the check without a version increase.
- Developed and tested reusable React components shared across healthcare applications; contributed to email/SMS authentication workflows.

INDEPENDENT PRODUCT

Table Fable — Full-stack creator | Live product | table-fable.com

Next.js, TypeScript, Prisma, PostgreSQL, Vercel, Cloudflare R2

- Built and run a trilingual publishing product with an admin content inbox, Telegram ingestion, duplicate detection and scheduled synchronization via Vercel Cron.
- Integrated LLM-assisted drafting and RU→EN/PT translation via Together API, Google Places data import, and image processing/storage on Cloudflare R2; designed the Prisma data model and wrote unit tests for import, translation and locale logic.

EDUCATION & LANGUAGES

HSE University — Bachelor’s, Science, Technology and Innovation Management and Policy (2008–2012). Frontend courses: Orion Innovation Learning Center, GeekBrains (2020–2021).

English B2 · Portuguese A1 · Russian native
